Michael Yankovich, Planning Manager

Telephone: (707) 784-6765

The County of Solano will be the Lead Agency and will prepare a Draft Environmental Impact Report (DEIR) for the proposed project identified below. We are interested in the views of your agency as to the appropriate scope and content of the DEIR's environmental information pertaining to your agency's statutory responsibilities in connection with the proposed project.

The proposed project, its location, and its potential environmental effects are described below.

Due to the time limits mandated by state law, your response must be sent at the earliest possible date but not later than 30 days after receipt of this notice.

Please send your response to the Solano County Department of Resource Management, Attention: Michael Yankovich, Planning Manager, 675 Texas Street, Suite 5500, Fairfield, CA 94533. Please provide a contact name for your agency with your comments.

Project Title:

Middle Green Valley Specific Plan

Project Proponent: County of Solano

Project Location:

See Figures 1 and 2. The proposed Middle Green Valley Specific Plan area is located on Green Valley Road, in unincorporated Green Valley, near the western boundary of Solano County; north of I-80, Jameson Canyon, and the Hidden Meadows subdivision (City of Fairfield); south of existing unincorporated subdivisions and the Green Valley Country Club in upper Green Valley; west of Suisun Valley and the Rockville Hills; and northwest of the East Ridge subdivision

(City of Fairfield).

¹References: California Code of Regulations, Title 14 (CEQA Guidelines), Sections 15103 and 15375.

Project Description: The County of Solano is proposing to prepare and adopt a Middle Green Valley Specific Plan for the approximately 1,911-acre Middle Green Valley planning area shown on Figure 2.

Solano County General Plan Goals and Objectives for Middle Green Valley

The Middle Green Valley planning area is identified in the 2008 Solano County General Plan as a Special Study Area. As part of the General Plan update process, a community participation program was conducted for this Special Study Area. The ultimate goal established for the area through this process was to maintain the rural character of Middle Green Valley while allowing some opportunities for compatible residential development. Land use tools such as clustering and transfer of development rights were proposed to limit the effects of residential development on the rural character of the valley, including the valley's viewsheds, wildlife habitat, wildlife movement corridors, and agricultural activities. General Plan-identified Implementation Program SS.I-1 calls for adoption of a plan (either a specific plan or master plan) for Middle Green Valley that would implement these goals and suggestions and specify, among other things:

- techniques, including design guidelines and development standards, to ensure that future development is compatible with the rural character of Middle Green Valley and surrounding areas;
- guidelines for residential development, including minimum and maximum lot sizes, development standards, and density bonus credits for clustered residential development;
- the details of a transfer of development rights program (and implementing ordinance), including the designation of areas where development is preferred and credits to property owners who voluntarily forgo development;
- the number of units and/or credits, with or without clustering, "that will provide incentives for all landowners in the area to participate in a market driven transfer of development rights program, based on 400 units, subject to further study;"
- the location and dimensions of a wildlife corridor ("green corridor");
- the maximum number of units any property owner can develop, with or without clustering:
- the techniques to be applied voluntarily by property owners to ensure permanent protection and maintenance of resources on lands to remain undeveloped; and
- the details of how the development would be served with water and wastewater service.

Proposed Middle Green Valley Specific Plan

Pursuant to these adopted 2008 Solano County General Plan objectives, the County proposes to complete and adopt a Middle Green Valley Specific Plan. The proposed Specific Plan would establish a land use and circulation layout, associated land use tools such as development clustering, a Transfer of Development Rights (TDR)/conservation easement program, and a land conservation trust, which are intended to limit the effects of development on the rural/agricultural character of the valley.

<u>Proposed Land Use Layout and Development Capacity</u>. Table 1 summarizes the proposed Specific Plan land use breakdown. Figure 3 illustrates the proposed Specific Plan land use layout.

As shown on Figure 3, the Specific Plan proposes three development areas or "neighborhoods" west of Green Valley Road. It is intended that the three development areas would be visually screened from Green Valley Road by natural topography and natural vegetation (existing riparian vegetation and oak woodland). Each neighborhood would contain a range of housing types, along with a neighborhood green and potential neighborhood-serving commercial uses. As summarized in Table 1, development within the three neighborhoods would be maintained within the following limits:

- up to 400 new residential lots totaling approximately 83 acres, including up to 390 cluster lots (zero lot line, quarter acre, half acre, and meadow lots) and 10 larger "compound lots" where up to 15,000 square feet of building space would be permissible on each lot to allow for one primary residential structure and associated agricultural or other secondary and ancillary structures;
- up to approximately 60,000 square feet of "agricultural tourism" related commercial floor space, including up to approximately 50,000 square feet of "agricultural commodity processing and commercial nurseries" (e.g., wineries, olive oil production, etc., using locally-produced commodities), and up to approximately 10,000 square feet of "agricultural tourism retail" (for retail sale of locally produced agricultural products such as wine, olive oil, flowers, produce, etc., and complementary food, books, craft/artisan wares, and other items) plus an inn (commercial lodging) of up to 25 rooms;
- a limited group (up to 6 acres) of complementary "public/community" uses, possibly including a chapel (up to 60 seats), meeting hall/farm stand (up to 3,000 square feet), community recreation center (up to 8,000 square feet), and small land conservancy/post office (up to 2,500 square feet); and
- potential neighborhood commercial areas, where a total of up to 10,000 square feet of retail floor space would be permitted to serve the convenience needs of the community.

The remaining area of approximately 1,606 acres (approximately 84 percent of the Specific Plan area) would be designated in perpetuity as "open lands" including approximately 1,156 acres of "natural and passive" land and approximately 450 acres of "active" land. The "natural and passive" open land designation would include riparian corridors, steep slopes, oak woodland, grazing lands, flood zones, trails and fire roads. The "active" open land designation would include cultivated row crops, vineyards, orchards, kitchen/community gardens and park/playground/ballfield uses.

<u>Proposed Circulation System.</u> Figure 4 shows the proposed Specific Plan circulation system. The proposed Specific Plan designates three "Rural Collector" roads (Green Valley Road, Mason Road, and a third proposed road extending from Green Valley Road to the southerly neighborhood. Additional "Neighborhood Roads," "Alleys/Driveways," and "Secondary Access/Emergency Vehicle Access" roads would extend from the rural collectors. In addition, pedestrian trails would connect the three neighborhoods and extend along Mason Road and Green Valley Road.

<u>Proposed Water and Wastewater Provisions.</u> Two water and wastewater system alternatives are proposed for the Specific Plan area: *Alternative A* which would involve connection of the Specific Plan development areas ("neighborhoods") to City of Fairfield municipal water and sewer systems; and *Alternative B* which would involve use of a common "onsite" water and sewer system to serve the Specific Plan development areas ("neighborhoods"). The two alternative proposals are summarized below:

Alternative A:

Water supply system Alternative A would involve Specific Plan development area connection to the City of Fairfield municipal water system. The City's municipal water supply is contracted through the Solano County Water Agency (SCWA). The City operates two water treatment plants, the Waterman Plant and the North Bay Regional Plant. City water distribution infrastructure includes a 24-inch main in Green Valley Road where the Specific Plan development areas would connect. Agricultural irrigation water would continue to be supplied by the Solano Irrigation District (SID). SID water will also be available for domestic irrigation. The proposed water supply infrastructure system under Alternative A would include approximately 9 miles of onsite pipeline and 500,000 gallons of onsite storage.

Wastewater treatment system Alternative A would involve Specific Plan development area connection to the Fairfield-Suisun Sewer District (FSSD). The FSSD operates a wastewater treatment plan approximately four miles southeast of the Specific Planning area. The FSSD does not typically provide sewer service outside of the Fairfield and Suisun City city limits. The closest existing FSSD wastewater infrastructure to the Specific Plan area is a 12-inch main in Green Valley Road approximately one quarter mile south of the Specific Plan area boundary. Due to the capacity limitations of this existing sewer main, installation of a new parallel sewer main from the Specific Plan area to the Cordelia Pump Station, approximately 2 miles to the south, may be required. The Cordelia Pump Station and FSSD wastewater treatment plant may also require capacity upgrades to accommodate the Specific Plan. The proposed wastewater system infrastructure under Alternative B would include approximately 9 miles of onsite pipeline.

Water and wastewater treatment *Alternative A* would require potential voter approval, City of Fairfield, Solano County, and Solano County Local Agency Formation Commission (LAFCO) approvals.

Alternative B:

Water supply system Alternative B would utilize local groundwater for domestic supply in the Specific Plan development area. The Specific Plan area lies above the Suisun-Fairfield Valley Groundwater Basin. The Suisun-Fairfield Valley Groundwater Basin is one of the few groundwater basins in California not in overdraft, most likely due to the early development of the Solano Project for regional irrigation demands. A comprehensive hydrogeology study and test well program would be necessary to verify the potential adequacy of onsite wells. Groundwater use would be solely for domestic purposes. Solano County Irrigation District (SID) reclaimed water would continue to be used for agriculture and domestic irrigation purposes. Water treatment under Alternative B is predicted to consist of mixed media filtration and disinfection unless measured chemical constituents indicate otherwise. The proposed onsite groundwater system configuration (pending more study) consists of three groundwater wells at a sustained flow of 100 gpm each, approximately 4.5 miles of pipelines, and 500,000 gallons of storage in two tanks at elevation.

A Community Services District (CSD) would be necessary to maintain the system.

Solano County General Plan policy PF.I-15 states "Investigate the potential for innovative recycled water systems in Solano County, such as the use of graywater for domestic and agricultural purposes, and identify sources of funding for implementation of these systems."

Under <u>wastewater treatment</u> system *Alternative B*, wastewater from the Specific Plan development areas would be collected and treated "onsite" utilizing a local collection system similar to *Alternative A*, but utilizing an "onsite" Membrane Bioreactor (MBR) package wastewater treatment plant. The MBR tertiary treatment system would include an aeration tank, a membrane operating system and a disinfection unit. All tertiary treated water would be reused onsite for agricultural and domestic irrigation purposes in conjunction with Solano Irrigation District water. System sludge yields under *Alternative B*, which would be less than from more conventional system designs, would be available for compost and fertilizer use in Solano County and elsewhere. Associated onsite infrastructure would include approximately 5.7 miles of pipeline, two pump stations and the MBR tertiary treatment unit. A Community Services District would be necessary to maintain the system.

<u>Proposed Agricultural/Open Space Protection</u>. The Specific Plan proposes to retain approximately 1,606 acres (approximately 84 percent of the planning area) in perpetuity in agriculture and open space preserves. The proposed TDR/ conservation easement program would give property owners the opportunity to place agricultural lands under a conservation easement in exchange for development rights, providing the main tool for preserving agricultural lands in the planning area.

The Specific Plan proposes the creation of the Green Valley Conservancy, a non-profit, tax-exempt, legally independent conservation trust that would oversee: (1) the preservation, monitoring, and management of natural resources; (2) the ongoing viability and sustainability of agricultural and grazing operations; (3) the promotion of educational, interpretive, and research opportunities; and (4) the establishment of a comprehensive community design review process. The TDR program conservation easements described above would be granted to the Green Valley Conservancy.

The Specific Plan would also include a Strategic Action Plan for Agriculture in Middle Green Valley that outlines an agricultural business strategy, suggested mix of farming types, sustainable agricultural practices, and marketing, management, and educational opportunities. The Green Valley Conservancy would use the Strategic Action Plan to guide agricultural operations and management of lands placed in conservation easements.

Required County Approvals

Implementation of the Specific Plan would require County approval of the proposed Specific Plan and an associated Zoning Map Amendment to incorporate the Specific Plan. Implementation of the Specific Plan would also ultimately require County approval of the proposed TDR/conservation easement program and implementing development agreement, and associated tentative and final subdivision maps. In addition, implementation of Specific Plan water and wastewater *Alternative A* would require potential voter approval, City of Fairfield, Solano County and Solano County Local Agency Formation Commission (LAFCO) approvals of water and sewer service area annexations. For water and wastewater

under Alternative B, formation of a Community Services District would require approval.

DEIR Scope:

The County has determined that the proposed Specific Plan will require preparation of a programmatic Environmental Impact Report (EIR) pursuant to the California Environmental Quality Act (CEQA). The following 17 environmental topics (listed alphabetically) will be evaluated in the program EIR:

- Aesthetics;
- Agricultural and Mineral Resources;
- Air Quality;
- Biological Resources;
- Climate Change;
- Cultural, Historic and Paleontological Resources;
- Energy;
- Geology and Soils:
- Hydrology and Water Quality:
- Land Use and Planning;
- Noise:
- Population and Housing:
- Public Health and Safety (including hazards and hazardous materials);
- Public Services and Utilities;
- Transportation and Circulation;
- Project Consistency with Adopted Local and Regional Plans; and
- Alternatives to the Proposed Project.

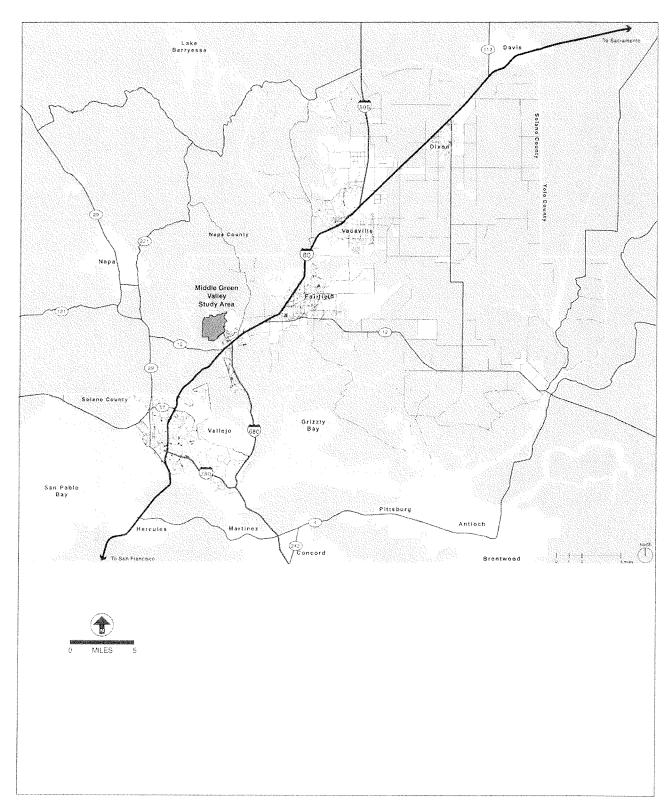

Notice of Scoping Meeting:

Pursuant to California Public Resources Code sections 21083.9 and 21092.2, the County will conduct a scoping meeting for the same purpose of soliciting oral and written comments from interested parties requesting notice, responsible agencies, agencies with jurisdiction by law, trustee agencies, involved federal agencies, and agencies and people who have requested notice, as to the appropriate scope and content of the EIR. The scoping meeting will be held on June 23, 2009 from 7:00 PM to 9:00 PM at the following location:

Solano County Administrative Building Multi Purpose Meeting Room, # 675 Texas Street, First Floor Fairfield, CA 94533 For additional information needs, please contact Michael Yankovich, Planning Manager; telephone: (707) 784-6765; FAX: (707) 784-4805.

Middle Green Valley Specific Plan EIR

APPENDIX 23.2: PROGRAM EIR AUTHORITY (CEQA SECTION 15168)

This EIR for the proposed Middle Green Valley Specific Plan has been prepared as a program EIR under authority of section 15168 (Program EIR) of the CEQA Guidelines. Section 15168 explains that a program EIR may be prepared on a series of actions that can be characterized as one large project and are related either: (1) geographically; (2) as logical parts in the chain of contemplated actions; (3) in connection with issuance of rules, regulations, plans, or other general criteria to govern the conduct of a continuing program; or (4) as individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways.

The proposed Specific Plan, and the series of actions required for its implementation, are characterized by all four of these relationships. One, they are geographically related, because all of the project, including all of its implementing actions, would occur in the same Middle Green Valley Special Study Area (planning area) within western Solano County. Two, the various local, state, and federal governmental approvals, entitlements, and permits that may be required for implementation of the project are all logical parts in the chain of actions contemplated by the Specific Plan. Three, project development would be undertaken in connection with the issuance of rules, regulations, plans, and other general criteria set forth as part of the Specific Plan. Four, activities under the Specific Plan would be comprised of various individual actions carried out under the statutory authority of Solano County that would generally have similar environmental effects that could be mitigated in similar ways.

Use of a program EIR can provide the following advantages. The program EIR can: (1) provide an occasion for a more exhaustive consideration of effects and alternatives than would be practical in an EIR on an individual action; (2) ensure consideration of cumulative impacts that might be slighted in a case-by-case analysis; (3) avoid duplicative reconsideration of basic policy considerations; (4) allow the Lead Agency (the County) to consider broad policy alternatives and program-wide mitigation measures at an early time when the agency has greater flexibility to deal with basic problems or cumulative impacts; and (5) allow reduction in paperwork.

Subsequent development activities within the Middle Green Valley Specific Plan must be examined in the light of the program EIR to determine whether an additional environmental document must be prepared. If the County determines that a later activity (e.g., individual development application, common improvement proposal, etc.) would have effects that were not examined in the program EIR, additional CEQA compliance documentation in the form of an EIR Addendum, Negative Declaration, Mitigated Negative Declaration, Supplemental EIR or Subsequent EIR would need to be prepared. If the County finds that pursuant to CEQA Guidelines section 15162 (Subsequent EIRs and Negative Declarations), no new effects could occur or no new mitigation measures would be required, the County can approve the activity as being within the scope of the project covered by the program EIR, and no new environmental document would be required. Under CEQA Guidelines section 15168 (Program EIR), the County shall incorporate feasible mitigation measures and alternatives developed in the program EIR into subsequent actions under the program. Where the

subsequent activities involve site-specific development actions or operations, the County should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the activity were covered in the program EIR.

A program EIR will be most helpful in dealing with subsequent activities if it deals with the effects of the program as specifically and comprehensively as possible. With a good and detailed analysis of the program, many subsequent activities can be found to be within the scope of the project described in the program EIR, and no further environmental document would be required.

A program EIR can be used to simplify the task of preparing environmental documents on later parts of the program. The program EIR can: (1) provide the basis for determining whether the later activity may have any significant effects; (2) be incorporated by reference to deal with regional influences, secondary effects, cumulative impacts, broad alternatives, and other factors that apply to the program as a whole; and (3) focus an EIR on a subsequent project to permit discussion solely of new effects which had not been considered before.

APPENDIX 23.3: SUPPLEMENTAL BIOLOGICAL RESOURCES INFORMATION

Scientific Name	Common Name		
Achillea millefolium	Yarrow		
Achyrachaena mollis	blow wives		
Aesculus californica	Buckeye		
Acer macrophyllum	big leaf maple		
Ailanthus altissima	tree of heaven		
Alium amplectens	narrowleaf onion		
Aloe saponaria	Aloe		
Amsinckia menziesii	common fiddleneck		
Anagallis arvensis	scarlet pimpernel		
Avena fatua	wild oats		
Arctostaphylos manzanita	common manzanita		
Artemisia californica	California sage		
Artemisia douglasiana	California mugwort		
Baccharis pilularis	coyote bush		
Baccharis salicifolia	Mulefat		
Bellardia trixago	Mediterranean linseed		
Brassica nigra	black mustard		
Brassica rapa	field mustard		
Briza minor	little quaking grass		
Bromus diandrus	ripgut brome		
Bromus hordeaceus	soft chess		
Chamomilla suaveolens	pineapple weed		
Castilleja densiflora	dense flower owl's clover		
Castilleja exserta	purple owl's clover		
Carduus pycnocephalus	Italian thistle		
Centaurea solstitialis	yellow star thistle		
Chlorogalum pomeridianum	soap plant		
Cirsium vulgare	bull thistle		
Claytonia perfoliata	miner's lettuce		
Collinsia heterophylla	Chinese houses		
Convolvulus arvensis	Bindweed		
Conyza canadensis	Horseweed		
Cortaderia selloana	pampas grass		
Crypsis schoenoides	swamp grass		
Cynara cardunculus	artichoke thistle		
Cynosurus echinatus	Dogtail		
Cyperus eragrostis	tall flatsedge		
Dichelostemma capitatum	blue dicks		
Eleocharis macrostachya	common spikerush		
Elymus glaucus	blue wildrye		
Erodium botrys	broad leaf filaree		

Erodium cicutarium	rodotom filoroo		
Eschscholzia californica	redstem filaree		
	California poppy		
Eucalyptus globulus Festuca idahoensis	blue gum eucalyptus Idaho fescue		
	Fennel		
Foeniculum vulgare			
Galium aparine	Bedstraw		
Geranium dissectum	cutleaf geranium		
Geranium molle	dove foot geranium		
Gnaphalium luteoalbum	everlasting cudweed		
Hedera helix	English ivy		
Heteromeles arbutifolia	Toyon		
Hordeum brachyantherum	meadow barley		
Hordeum marinum	Mediterranean barley		
Hordeum murinum	foxtail barley		
Hordeum vulgare	common barley		
Hypochaeris radicata	rough cat's ear		
Iris douglasiana	Douglas iris		
Iris sp.	Iris		
Juglans hindsii	black walnut		
Juncus effusus	spreading rush		
Juncus patens	grey rush		
Juncus xiphioides	iris rush		
Lactuca serriola	prickly wild lettuce		
Lathyrus sp.	tule pea		
Layia crysanthemoides	smooth tidy tips		
Leymus triticoides	wild rye		
Limnanthes douglasii ssp.rosea	Douglas' meadowfoam		
Lolium multiflorum	Italian ryegrass		
Lotus corniculatus	bird's foot trefoil		
Lupinus bicolor	bicolored lupine		
Lupinus succulentus	succulent lupine		
Mara fabaceus	wild cucumber		
Marrubium vulgare	Horehound		
Medicago polymorpha	bur clover		
Melilotus indica	annual yellow sweet clover		
Melilotus officinalis	yellow sweet clover		
Mentha pulegium	Pennyroyal		
Mimulus aurantiacus	sticky monkeyflower		
Mimulus guttatus	yellow monkeyflower		
Monardella sp.	monardella (not blooming)		
Muilla maritima	common muilla		
Nassella pulchra	purple needlegrass		
Paspalum dilatatum	dallis grass		
Phalaris aquatica	barnyard grass		
Picris echioides	bristly oxtongue		
Plagiobothrys bracteatus	bracted popcorn flower		
Plantago erecta	dwarf plantain		
Plantago lanceolata	English plantain		
Poa annua	annual bluegrass		
Poa secunda	one-sided bluegrass		
Polygonum amphibium	water knotweed		
Polygonum arenastrum	common knotweed		
Polypogon monspeliensis	rabbit foots grass

22 – 23, 2009. Scientific name	Common name
MAMMALS	
Odocoileus hemionus	Mule (Black-tailed) Deer
Spermophilus beecheyi	California Ground Squirrel
Sciurus griseus	Western Gray Squirrel
Peromyscus manichulatus	Deer Mouse
Lepus californicus	Black-tailed Jackrabbit
BIRDS	Diagn tailed Gaethabbit
Anas strepera	Gadwall
Anas americana	American Wigeon
Anas platyrhynchos	Mallard
Meleagris gallopavo	Wild Turkey
Callipepla californica	California Quail
Phalacrocorax auritus	Double-crested Cormorant
Ardea herodias	Great Blue Heron
Cathartes aura	Turkey Vulture
Buteo lineatus	Red-shouldered Hawk
Buteo jamaicensis	Red-tailed Hawk
Falco sparverius	American Kestrel
Gallinula chloropus	Common Moorhen
Fulica americana	American Coot
Columba livia	Rock Pigeon
Streptopelia decaocto	Eurasian Collared-Dove
Zenaida macroura	Mourning Dove
Calypte anna	Anna's Hummingbird
Ceryle alcyon	Belted Kingfisher
Melanerpes lewis	Lewis's Woodpecker
Melanerpes formicivorus	Acorn Woodpecker
Picoides nuttallii	Nuttall's Woodpecker
Picoides villosus	Hairy Woodpecker
Colaptes auratus	Northern Flicker
Empidonax oberholseri	Dusky Flycatcher
Myiarchus cinerascens	Ash-throated Flycatcher
Lanius Iudovicianus	Loggerhead Shrike
Vireo huttoni	Hutton's Vireo
Cyanocitta stelleri	Steller's Jay
Aphelocoma californica	Western Scrub-Jay
Corvus corax	Common Raven
Eremophila alpestris	Horned Lark
Tachycineta bicolor	Tree Swallow
Tachycineta thalassina	Violet-green Swallow
Petrochelidon pyrrhonota	Cliff Swallow
Hirundo rustica	Barn Swallow
Baeolophus inornatus	Oak Titmouse
Psaltriparus minimus	Bushtit White breested Nutbetch
Sitta carolinensis	White-breasted Nuthatch
Thryomanes bewickii	Bewick's Wren
Troglodytes aedon	House Wren
Sialia mexicana	Western Bluebird

Turdus migratorius	American Robin	
Chamaea fasciata	Wrentit	
	11191111	
Mimus polyglottos	Northern Mockingbird	
Sturnus vulgaris	European Starling	
Anthus rubescens	American Pipit	
Vermivora celata	Orange-crowned Warbler	
Piranga ludoviciana	Western Tanager	
Pipilo maculatus	Spotted Towhee	
Pipilo crissalis	California Towhee	
Chondestes grammacus	Lark Sparrow	
Ammodramus savannarum	Grasshopper Sparrow	
Pheucticus melanocephalus	Black-headed Grosbeak	
Agelaius phoeniceus	Red-winged Blackbird	
Sturnella neglecta	Western Meadowlark	
Euphagus cyanocephalus	Brewer's Blackbird	
Molothrus ater	Brown-headed Cowbird	
Icterus cucullatus	Hooded Oriole	
Carpodacus mexicanus	House Finch	
Carduelis psaltria	Lesser Goldfinch	
REPTILES AND AMPHIBIANS	·	
Hyla regalis	Pacific Treefrog	
Bufo borealis	Western Toad	
Actinemys marmorata	Western Pond Turtle	
Eumeces skiltonianus	Western Skink	
Sceloporus occidentalis	Western Fence Lizard	
Thamnophis sirtalis fitchi	Common garter snake	

Table 23.3.3 SPECIAL-STATUS PLANT SPECIES WITH THE POTENTIAL TO OCCUR IN THE PLAN AREA

Plant Species	Regulatory Status	Blooming Period	Potential Habitat in Plan Area
Alkali milk-vetch (Astragalus tener var. tener)	CNPS List 1B	March - June	Low-lying areas surrounding wetlands, streams, and other aquatic features.
Big-scale balsamroot (<i>Balsamorhiza macrolepis var.</i> <i>macrolepis</i>)	CNPS List 1B	March - June	Grazed grassland, woodland, shrub/scrub communities and uncultivated areas with shallow soils.
Big tarplant (<i>Blepharizonia plumosa</i>)	CNPS List 1B	July - October	Grassland communities in the plan area.
Narrow-anthered California brodiaea (Brodiaea californica var. leptandra)	CNPS List 1B	May to July	Thin soiled areas, in grassland, shrub/scrub, and oak woodland communities.
Mt. Diablo fairy lantern (Calochortus pulchellus)	CNPS List 1B	April to June	Oak woodlands, riparian forest, scrub, and grassland areas immediately surrounding these communities.
Tiburon Indian paintbrush (Castilleja affinis ssp. neglecta)	ST, FE, CNPS List 1B	April through June	Grassland communities (particularly areas with thin soils).
Holly-leaved ceanothus (Ceanothus purpureus)	CNPS List 1B	February to June	Oak woodland and shrub/scrub communities.
Pappose tarplant (Centromadia parryi ssp. parryi)	CNPS List 1B	May to November	Low-lying grasslands and ruderal areas, particularly those surrounding wetlands.
Western leatherwood (Dirca occidentalis)	CNPS List 1B	January to March ¹	Oak woodland and riparian communities.
Dwarf downingia (<i>Downingia pusilla</i>)	CNPS List 2	March and May	Edges of marsh and other aquatic habitats with a long duration of ponding.
Adobe lily (<i>Fritillaria pluriflora</i>)	CNPS List 1B	February to April	Grassland communities.
Diablo helianthella (Helianthella castanea)	CNPS List 1B	March to June	Grasslands, oak woodlands, and shrub/scrub containing suitable shallow soils and rock outcrops.
Brewer's western flax (Hesperolinon breweri)	CNPS List 1B	May to June	Oak woodlands and grassland communities.
Northern California black walnut (Juglans hindsii)	CNPS List 1B	April to May ¹	Species was observed along Hennessey Creek. Oak woodland and riparian communities.
Robust monardella (Monardella villosa ssp. globosa).	CNPS List 1B.2	June to July	Oak woodland and scrub communities.
Baker's navarretia (Navarretia leucocephala ssp. bakeri).	CNPS List 1B.1	April to July	Oak woodland and wetland communities.
Rayless ragwort (Senecio aphanactis).	CNPS List 2	January through April	Oak woodland and scrub communities.
Showy Indian clover (<i>Trifolium amoenum</i>)	FE, CNPS List 1B	April to June	Grassland communities (particularly areas of heavy clay soils).
Saline clover (<i>Trifolium depauperatum</i> var. <i>hydrophilum</i>)	CNPS List 1B	April to June	Margins of wetlands and stock ponds.

Plant Species	Regulatory Status	Blooming <u>Period</u>	Potential Habitat in Plan Area
Oval-leaved viburnum (Viburnum ellipticum)	CNPS List 2.3	May to June	Oak woodland and shrub/scrub communities.

APPENDIX 23.4 WATER SUPPLY ASSESSMENT

TO: Community Development Department

FROM: Richard L. Wood, Assistant Public Works Director

SUBJ: Hypothetical SB 610 Water Supply Assessment and SB 221 Verification of

Sufficient Water Supply – Middle Green Valley Development

The following is a hypothetical "SB 610/SB 211 analysis" should the City of Fairfield be the selected water supplier for a proposed Middle Green Valley development that uses 140 acre-feet of City water per year. This memorandum is not intended to express any opinion regarding the advisability of the development or the legal or policy decisions that would be necessary for the City to become the development's water supplier.

This memorandum documents the City of Fairfield's compliance with SB 610 (Chapter 643, Statutes of 2001, codified primarily in §10631 and §10910, et seq. of the California Water Code, relating to water supply planning) and SB 221 (Chapter 642, Statutes of 2001, codified in §11010 of the California Business and Professions Code and §§65867.5, 66455.3, and 66473.7 of the California Government Code, relating to land use) for the Middle Green Valley Development (proposed development).

Both SB 610 and SB 221 became effective January 1, 2002. The two statutes were written to ensure water demand in an area does not outstrip water supplies. Specifically, growth should not proceed without adequate water supplies available under some defined, reasonable "worst case" scenario. This position is also the long-standing policy of the City of Fairfield.

The City has historically taken a conservative view of its water supplies and demands, consistent with the letter and intent of SB 610 and SB 221. In fact, the City is perhaps even more conservative than SB 610 or SB 221 require, as discussed further below.

General Information

The City meets its water supply planning requirements by normalizing all water supplies to a common "90% reliable" figure—i.e., the supply that can be depended upon in at least 9 years out of 10, on average, sometimes also referred to as the "90% exceedence" standard—for meeting expected demands. For the 1 year out of 10 in which supplies may be inadequate to meet demand, the City has both demand reduction and temporary supply options.

SB 610 requires a 20-year water supply assessment for "normal," "single dry year," and "multiple dry year" scenarios, and this analysis is also included in the City's Urban Water Management Plan (UWMP). Although there is some debate about the intent of specifying two different "worse than normal" scenarios, we believe the intent was for the multiple dry year scenario to be the worst case for planning purposes, and demand must not exceed that supply. The City's 90% reliable scenario, used for this analysis, is slightly more conservative than the UWMP's multiple dry year scenario.

SB 610 Analysis for Proposed Development

The City's General Plan land use development projections serve as the basis for water demand projections in the City's 2005 Urban Water Management Plan (UWMP), last revised and adopted in December 2006, hereby incorporated by reference, which contains information required by Water Code Section 10910. This memorandum provides all of the required supplemental information to include the proposed development in the water demands of the General Plan and the UWMP, including updated water supply and demand figures up to and including the proposed development.

The proposed development will create a 136 acre-foot per year demand on the City water supply that is not presently in the City's General Plan or present water supply planning. This memorandum assesses and verifies the sufficiency of City water supplies to serve this change.

The City of Fairfield's water supplies are the Solano Project, the State Water Project, Settlement Water, and recycled water, described in greater detail in the City's UWMP and General Plan. Solano Project supplies come to the City through several different agreements. The City utilizes no groundwater supply. As required by SB 610, attached hereto as Table 1 is a summary of water supply reliability over the past 21 years, 1989 through 2009, for the Solano Project and State Water Project.

The attached Table 2 and 3 show the presently forecasted water supplies and demands for the City of Fairfield without the proposed development (Table 2) and with the proposed development (Table 3). (To ensure consideration of cumulative impacts, these tables include other forecasted developments that have gone through a water supply assessment such as this one prior to this analysis.)

Table 3 shows the City can serve all projected growth, through ultimate development (not just 20 years), including the proposed development. Consequently we conclude that the City has a sufficient water supply for the proposed development, and the requirements of SB 610 are met. ¹

¹ SB 610 and SB 221 apply only to certain classes of large projects. The most applicable to the City of Fairfield are residential developments of more than 500 dwelling units. However, City policy is to provide water supply assurance for all developments served regardless of size.

SB 221 Analysis for Proposed Development

SB 221 requires, at the tentative map stage, a written verification of sufficient water supply. This memorandum provides substantial evidence that that requirement is or will be met for all projects to be served by the City through ultimate development, including the proposed development. This memorandum, as a supplement to the City's current UWMP, which includes development projections consistent with the General Plan absent the increased water supply required by subsequent proposed development included in this analysis, therefore provides the written verification of sufficient water supply for the proposed development.

SB 221 also requires imposition of a condition of approval on the tentative subdivision map for this project that sufficient water supply shall be available, and such a condition should be incorporated into any approval of this project. (Govt. Code Sec. 66473.7(b)(1)).

Changing Assumptions

The California Courts have decided an important case that we believe will have a major positive effect on City water supply projections. The case (consolidated State Water Resources Control Board Cases, C044714), commonly referred to now as "the Robie Decision" (after the 3rd District California Court of Appeal Judge Ronald B. Robie, who authored the decision) held that the state's watershed protection statutes apply to water supply contracts, not just to water supplies obtained directly by permit or license. In May 2006, the California Supreme Court refused to hear petitions for review, so the Robie Decision is final.

We believe the Robie Decision provides strong support for the contention that the state Department of Water Resources must recognize the City's watershed priority (per Water Code Section 11460 et seq.) to State Water Project water (for which the City holds a contract via Solano County Water Agency). If we are correct, this means the City's State Water Project water supply shown in the Urban Water Management Plan should not be discounted due to unreliability in dry years, but rather should be "counted" at the maximum contract amount of 14,678 acre-feet per year. This represents a dry-year (90% exceedence) gain of nearly 9,000 acre-feet per year from what is shown now in the Urban Water Management Plan. The Solano County Water Agency and other State Water Project contractors within areas covered by the watershed protection statutes, at our urging, have filed a lawsuit against the state Department of Water Resources asserting these rights. The trial is pending.

APPENDIX 23.5:

CEQA STANDARDS FOR EIR ADEQUACY

According to section 15151 of the CEQA Guidelines, the "Standards for Adequacy" of an EIR are as follows:

An EIR should be prepared with a sufficient degree of analysis to provide decision-makers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among the experts. The courts have looked not for perfection but for adequacy, completeness, and a good faith effort at full disclosure.

APPENDIX 23.6:

CEQA DEFINITION OF "MITIGATION"

According to section 15370 of the CEQA EIR Guidelines, the term "mitigation" includes:

- (a) Avoiding the impact altogether by not taking a certain action or parts of an action.
- (b) Minimizing impacts by limiting the degree of magnitude of the action and its implementation.
- (c) Rectifying the impact by repairing, rehabilitating, or restoring the impacted environment.
- (d) Reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action.
- (e) Compensating for the impacts by replacing or providing substitute resources or environments.
