ATTACHMENT A

Document Type	Notice of Determination
Public Agency	Fairfield-Suisun Sewer District
Address	1010 Chadbourne Rd. Fairfield, CA 94534
State Clearinghouse Number	2024121118
Project Title	Kellogg Resiliency Project
Project Applicant	Fairfield-Suisun Sewer District
Project Location	Suisun City, CA, Solano County (south School St., Maple St., Kellogg St.)

Project Description

Located in Suisun City, CA, Solano County: the Project includes replacing/ rehabilitating mechanical equipment at Kellogg Pump Station to address flood risks for the downtown Suisun City community and improve stormwater infrastructure reliability. Installing green stormwater infrastructure on School St., Maple St., and Kellogg St.; constructing a fire vehicle and maintenance access road along the southern side of the existing Kellogg stormwater detention basin; replacing damaged fencing along the northern side of the existing Kellogg stormwater detention basin; and removing invasive plant species within and around the existing Kellogg stormwater detention basin, all to improve water quality, and increase wildfire resilience.

The Project site is located in the City of Suisun City in a residential area west of Suisun Slough. The Project site includes City of Suisun City's right-of-way; undeveloped/unpaved areas within two City-owned parcels (APNs 032-245-160, 032-245-200); and limited work on one parcel owned by the Suisun Wildlife Center (APN 032-245-190). The Project site is situated in a residential area in Suisun City along the northern outskirts of the Suisun Marsh.

The Kellogg stormwater detention basin is intended to collect stormwater from School Street, Maple Street, Long Street, Walnut Street, and Elwood Street, which comprise the neighborhood drainage area. The Project site area is becoming increasingly susceptible to environmental hazards as a result of climate change, including sea level rise, flooding, and wildfires. The primary purpose of the Project is to rehabilitate existing stormwater infrastructure to address flood risks for the surrounding community, improve stormwater infrastructure reliability, improve water quality, and increase wildfire resilience. The Project would also replace the existing pavement at the intersection of Maple Street and School Street and reconstruct and repave the southern terminus of School Street, as well as update pedestrian facilities to be in compliance with standards established by the Americans with Disabilities Act.
